# Project 4 Report

Analysis of 425.trace

Src Ip and Dst Ip. Color shows sum of Payload Len. Size shows sum of Payload Len. The marks are labeled by Src Ip and Dst Ip.

The interesting facet here is that a huge amount of traffic being sent to destination IP address 149.124.x.x. From the graph, the top packet transmissions are sent to such addresses, and the source addresses are evidently much more varied on closer inspection. This could represent many external users sending requests to a few particular servers to, although more analysis would need to be done to confirm this hypothesis.

This graph is built using Tableau and the data used is that of the -m option. The conversion of the original output to CSV format was accomplished using `analysis_425.ipynb` and the Tableau workbook is `analysis_425.twb` .
